RINGVORLESUNG, DISKUSSION & WORKSHOPS wintersemester 2011 | 12
LECTURE SERIES, DISCUSSION & WORKSHOPS winter-term 2011 | 12**FORM – RULE**
RULE – FORM

The form of an object stands not only for its spatial (architectural) quality but also for its structural potential. The principles or rules that are set up or found in order to create form and space can be described as predefined or postdefined.

The different approaches to "Form" which can be of physical, geometrical, material, aesthetical, ... nature can be of deep interest for all space creating disciplines, like architecture or engineering.

The aim of the lecture series, discussion and workshops is to recognize, better understand and develop the mostly separately examined aspects in the creation of forms as a complex holistic system. In this regard an inter- and transdisciplinary exchange can be seen as an important step in this direction and open new perspectives and possibilities for all involved disciplines.
